

How do sharks live?

Aufgaben:

1. Fill in the gaps with the right words!
2. Scan the QR code to check your answers!
3. Copy the text in your exercise book!
4. Formulate the content of the text yourself!

Use all gap words!

Sharks aren't researched very well yet, so _____ don't know much about them. However, one thing that is known about them is: Some _____ must always be moving so that they don't sink to the bottom of the _____.

Most shark types feed on fish and other larger sea animals. But especially some larger _____ feed on plankton as well. Plankton are little animals or plants that let themselves be pushed by the _____.

Sharks also have enemies: smaller sharks are eaten by larger sharks, stingrays and _____. The biggest enemies of sharks remain humans. Mostly in Asia people eat shark meat as it is a _____. About five humans are killed by shark attacks per year.

The reproduction of sharks takes a long _____ as they must be 30 years old to mate for the first time. Some shark types lay their _____ on the ocean floor and then keep on swimming. Some other shark types carry their babies in their _____ for up to two years. They have about five babies in their _____ and usually, they eat each other. Only the strongest one will be born. Most _____ are eaten as eggs or babies. When baby sharks are born, they are up to half a _____ long. Most shark types are threatened with extinction. This isn't only because of _____ and other natural causes it is also because they need to be older to mate.
